Virtual Patient Simulation System - Whole Body Patient Simulators (VPSS - WBPS)

Description/Summary of Program Requirements

The Joint Project Management Office for Medical Modeling and Simulation (JPMMO MMS) has a requirement for virtual medical training devices that simulate anatomy and physiology. The VPSS-WBPS contract will be comprised of High Fidelity, Low Fidelity, Veterinary Simulators and ancillary Support Services. These Commercial Off The Shelf (COTS) simulators will simulate whole body anatomy/physiology and will be integrated into developmental solutions used for training, evaluating, and certifying personnel in multiple medical tasks and skills. These COTS training devices will be delivered to locations in CONUS and OCONUS.

Advanced Joint Airway Management Simulator (AJAMS)

Description/Summary of Program Requirements

The U.S. Army Program Executive Office for Simulation, Training and Instrumentation (PEO STRI), Joint Project Office for Medical Modeling and Simulation (JPO-MMS) has an immediate need for an Advanced Joint Airway Management Simulator (AJAMS) that will improve the training capability and clinical proficiency in providing medical interventions in response to an airway compromise condition.

The number of potentially survivable battlefield fatalities concerning airway compromise remains unacceptably high. Currently available commercial airway management simulators lack the required fidelity/realism and do not adequately prepare combat medical personnel for what they will encounter in practice. Therefore, the military medical community has a need for an advanced airway management simulator that will improve training capability and clinical proficiency in providing medical interventions in response to an airway compromise condition.

Medical Simulation Training Centers (MSTC)

Medical Training Command and Control (MT-C2)

Description/Summary of Program Requirements

The Product Manager for Medical Simulation (PdM MedSim) has a requirement for the production and installation of a Medical Training Command and Control (MT-C2) capability in support of the fixed MSTC training platforms. The MT-C2 system supports the concept of a centralized training system control and management, data capture, and training feedback within the MSTC facilities. The MT-C2 enables training environment manipulation, medical scenario development and integration, mannequin control, and audio video (AV) surveillance and recording. The MT-C2 system also provides for the real-time manipulation of the environments in order to maximize the impact and experience of each training event. The MT-C2 system will create a standardized framework for all future equipment to be deployed in or integrated with the fixed MSTC capabilities.

Medical Simulation Training Centers (MSTC) Exportable Tactical Combat Casualty Care (TC3X)

Description/Summary of Program Requirements

The Product Manager for Medical Simulation (PdM MedSim) has a requirement for the procurement of an Exportable Tactical Combat Casualty Care (TC3X) training capability that will provide commanders the capability to execute realistic casualty Warrior Skill level 1 through 4 training at the individual, leader and collective levels where Soldiers train. The Exportable TC3 Capability will be performance based and consist of:

- Live Training Capability (Point of Need Training)
 - 1 Kit trains 30 Soldiers (Platoon) per day
 - Soldier operated turnkey capability based train the trainer course
 - Realistic casualty effects
- TC3X kit definition will be predicated on the lessons learned from the REF TC3 effort

Warrior Injury Assessment Manikin (WIAMan)

Description/Summary of Program Requirements

WIAMan provides new anthropomorphic test device (ATD) system, purpose-built for the Title 10 LFT&E under-body blast environment and associated biomechanics data and analysis tools to assess the probability of injury for ground vehicle occupants.

The effort is currently a science and technology program to define the trade space for the test capability by conducting biomechanics testing and by designing, fabricating, testing and refining prototypes of an ATD to represent the 50th percentile male Soldier.
